

## ABSTRACT:

A recording arrangement (1) is adapted to record an information signal (FS) of an information broadcast during a programmed recording time slot (AZ). In order to program the recording time slot (AZ) the recording arrangement (1) can supply OSD information (OSD) in a programming mode of the recording arrangement (1), which information can be displayed by means of a television set (9) connected to the recording arrangement (1) and includes a time/date table (14; 17). In the time/date table (14; 17) selection time slots (AW) of N minutes are shown, which can be marked as a recording time slot (AZ) by a user, as a result of which the recording arrangement (1) is programmed to record the received information signal (FS).
